# TEST SUMMARY REPORT

Prepared by: C. Swathi

Project: SwathiMart – Online Shopping Website Manual Testing

| | |
|---|---|
| **Application** | SwathiMart – Online Shopping Website |
| **Application Type** | Web Application |
| **Testing Type** | Functional and UI Testing |
| **Testing Approach** | Manual Testing |
| **Tested By** | C. Swathi |
| **Test Environment** | Web application / Laptop |
| **Browser** | Google Chrome (update if different) |
| **Test Status** | Sample report prepared; update with actual execution results |

## 1. Testing Objective

The objective of testing the SwathiMart online shopping website is to verify that key shopping features work as expected and provide a smooth user experience. Testing focuses on login, product display, product search, add-to-cart, checkout validation, order placement flow, and logout.

## Focus Areas

• Verify the main functional requirements of the shopping website.

• Check positive and negative user scenarios.

• Identify, document, and report defects with clear reproduction steps.

• Validate product search results and cart updates.

• Check checkout field validation and navigation consistency.

## 2. Testing Scope

| Module | Coverage |
|---|---|
| Login | Valid login and invalid password handling |
| Product Display | Product list visibility and product details |

| Module | Coverage |
|---|---|
| Product Search | Search for an available product and an unavailable product |
| Add to Cart | Add a product to the cart and verify cart contents |
| Checkout | Empty-cart checkout and required-field validation |
| Order Flow | Verify the order flow where supported by the application |
| Logout | Logout and return to the login/home screen |

## 3. Test Environment

| Item | Details |
|---|---|
| Application | SwathiMart online shopping website / project test build |
| Testing Type | Manual functional and UI testing |
| Operating System | Windows (update to the actual OS used) |
| Browser | Google Chrome (update to the actual browser used) |
| Device | Laptop |
| Network | Internet connection available during testing |

## 4. Test Execution Summary

The table below is a project-template summary based on the previously described SwathiMart checks. Confirm the counts against your final test case execution sheet before submitting.

| Test ID | Module / Scenario | Result | Notes |
|---|---|---|---|
| TS01 | Valid login | PASS | Login worked as expected |
| TS02 | Invalid password | PASS | Invalid password was handled as expected |
| TS03 | Product display | PASS | Products were displayed |
| TS04 | Search for Laptop | PASS | Laptop search worked |
| TS05 | Search for unavailable product 'xyz' | FAIL* | Search result behavior needs review |
| TS06 | Add Laptop to cart | PASS | Product was added to cart |
| TS07 | Empty username validation | FAIL* | Validation issue observed / to be confirmed |
| TS08 | Shop Now button | FAIL* | Button reportedly did not navigate to the expected screen |

*FAIL entries are based on the issues described in the project discussion and should be re-tested on the current build before final submission.

## 5. Defect Summary

| Defect ID | Summary | Severity | Status |
|---|---|---|---|
| DEF-01 | Search for an unavailable product ('xyz') does not show the expected no-results behavior (verify) | Medium | To confirm |
| DEF-02 | Empty username is not validated as expected (verify) | High | To confirm |
| DEF-03 | Shop Now button remains on the same screen / does not navigate as expected | Medium | To retest |

## 6. Entry Criteria

• The application is accessible.

• Test cases are prepared and reviewed.

• The test environment is ready.

• Required test data is available.

## 7. Exit Criteria

• All planned test cases have been executed.

• Critical shopping workflows have been verified.

• Observed defects have been documented for follow-up.

• Final pass/fail status is reviewed before sign-off.

## 8. Risks and Assumptions

**Risks:** Product search, cart updates, or checkout pages may not respond correctly; the Shop Now button may not navigate as expected; order placement may depend on the available test build.

**Assumptions:** Stable internet is available, test data is valid, and the website is accessible during execution. Any scenario not executed on the current build must be marked accordingly.

## 9. Conclusion

The SwathiMart online shopping website was reviewed for core shopping workflows including login, product display, search, add-to-cart, checkout-related validation, and navigation. The report records the observed results and potential defects from the project notes. The items marked for confirmation should be retested and the final counts updated before formal submission.
