TEST PLAN DOCUMENT

SWATHIMART – Online Shopping Website Manual Testing Project

1. Document Control

Item	Details
Document Name	Test Plan
Project Name	SwathiMart – Online Shopping Website
Testing Type	Manual Testing
Prepared By	C. Swathi
Application Type	E-commerce / Online Shopping Web Application

2. Introduction

2.1 Purpose

The purpose of this Test Plan is to define the testing strategy, scope, approach, environment, schedule, and deliverables for manually validating the SwathiMart online shopping website. The objective is to check whether the main shopping workflows behave as expected and to record, report, and track defects.

2.2 Scope

This plan covers manual testing of the following modules: Registration/Login, Product Display, Product Search, Product Details, Add to Cart, Cart Update/Remove, Checkout, Order Confirmation, and Logout.

2.3 References

SwathiMart project test scenarios, test cases, test data, and the website build made available for testing.

3. Test Strategy

Testing Type	Description
Smoke Testing	Check that the website opens and core pages/features are available.
Functional Testing	Verify login, product search, cart, checkout, and logout against expected results.
Integration Testing	Check interactions between product, cart, checkout, and order confirmation modules.
System Testing	Validate end-to-end shopping flows from product selection to order confirmation.
Usability Testing	Check page layout, labels, navigation, and user-friendly messages.
Compatibility Testing	Check supported website behavior in Google Chrome and Microsoft Edge.
Validation Testing	Test valid, invalid, empty, and boundary inputs in forms and checkout.

3.1 Test Levels

System Testing and User Acceptance Testing (basic user-flow validation).

4. Test Environment

Item	Details
Application	SwathiMart online shopping website
Environment	QA / test environment
Operating System	Windows
Browsers	Google Chrome, Microsoft Edge
Testing Method	Manual Testing
Test Data	Valid/invalid user credentials, product names, cart quantities, and checkout form values

5. Test Scope

5.1 In-Scope

• Registration and Login
• Product listing/display
• Product search
• Product details
• Add product to cart
• Update quantity and remove item
• Empty-cart behavior
• Checkout form validation
• Successful order placement and confirmation
• Logout

5.2 Out-of-Scope

• Performance, load, and stress testing
• Security penetration testing
• Source-code/unit-level testing
• Payment gateway certification or real-money transactions
• Production database and infrastructure testing

6. Entry & Exit Criteria

6.1 Entry Criteria

• Website/test build is accessible.
• Required test data is prepared.
• Valid login credentials are available, if registration is not part of the test.
• Test scenarios and test cases are reviewed and ready.
• Browser and test environment are available.

6.2 Exit Criteria

• All planned test cases have been executed or their status explained.
• Failed cases and defects are documented.
• Critical shopping flows have been checked.
• Test Execution Report and Test Summary Report are prepared.

7. Suspension & Resumption Criteria

7.1 Suspension Criteria

Testing may be paused if the website is unavailable, crashes repeatedly, a blocking defect prevents further testing, or the test environment/test data is unavailable.

7.2 Resumption Criteria

Testing will resume when a stable build is available, blocking issues are addressed or workaround is agreed, and the environment and test data are restored.

8. Test Deliverables

The following project documents will be prepared:

• Test Plan
• Test Scenarios
• Detailed Test Cases
• Defect Log / Defect Reports with screenshots where applicable
• Test Execution Report
• Test Summary Report
• Requirements Traceability Matrix (RTM), if requirements are provided

9. Defect Management

• Defects will be recorded in an Excel defect log.
• Each defect will include ID, title, module, steps to reproduce, expected result, actual result, severity, priority, status, and evidence where available.
• Failed test cases will be linked to relevant defects.
• Defects will be tracked until closure.

Defect Status Flow

Open → In Progress → Fixed → Retest → Closed
If the issue still occurs during retesting: Retest → Reopen.

10. Roles & Responsibilities

Role	Responsibility
QA Tester – C. Swathi	Prepare test scenarios and test cases; execute tests; compare actual and expected results; record evidence; report and retest defects; prepare reports.

11. Test Schedule

Phase	Estimated Duration
Test Planning	1 day
Test Scenario Design	2 days
Test Case Design	2–3 days
Test Execution	2–3 days
Defect Reporting and Retesting	As required; estimated 2 days
Test Closure and Summary	1 day

Note: The schedule is an estimate and may change depending on website access, defects, and the number of test cases.

12. Risks & Mitigation

Risk	Mitigation
Requirements change	Update scenarios and test cases when requirements change.
Limited time	Prioritize login, search, cart, and checkout workflows.
Test environment unavailable	Inform the responsible person and resume when access is restored.
Defect fix delays	Track open defects and retest once a fix is provided.
Missing test data	Prepare valid, invalid, and boundary test data before execution.

13. Test Metrics

The following metrics may be tracked after execution:

- Test case execution percentage = Executed test cases ÷ Total planned test cases × 100
- Pass/fail count and ratio
- Number of defects by severity and status
- Number of defects reopened during retesting

14. Tools

Tool	Purpose
Microsoft Excel	Test case management, execution tracking, and defect log.
Google Chrome	Primary browser for manual testing.
Microsoft Edge	Browser compatibility checks.
Screenshots / Snipping Tool	Capture evidence for failed cases and defects.

15. Assumptions

- The SwathiMart test website/build will be available during testing.
- Test data and credentials can be used safely in the test environment.
- The product catalogue and checkout pages are accessible.
- No real payment will be made unless a safe test payment method is explicitly provided.

16. Test Closure

Testing will be closed when planned cases have been executed, exit criteria are reviewed, defects and unresolved issues are documented, and final execution and summary results are recorded.
